

Statement regarding Conflict Minerals

Persistor Instruments is a small privately held company that is not required to file reports with the SEC, including section 1502, under the Exchange Act.

Persistor Instrument's products are electronic devices containing integrated circuits, capacitors, transistors, printed circuit boards, and connectors. Most of these components do contain one or more of tin, gold and tantalum and these elements are absolutely necessary to the functionality and quality of the electronic devices. All of these components are acquired through mainstream distribution from major market manufacturers. Some of these components were acquired before section 4.15.2 of the Dodd-Frank Wall Street Reform and Consumer Protection Act went into effect in November 2012. Persistor Instruments does not acquire any Conflict Minerals from any foundry.

Persistor Instruments does not have the financial resources to investigate the Sourcing Information of Conflict Minerals contained in these components and will be unable to respond to requests for "Country of Origin" inquiries by companies who are required to file SEC form SD. Should any customer wish to fund the cost of research necessary to determine the foundry source of the components used by Persistor Instruments, that may be arranged.

Note; As of August 18, 2015 The US District Court for the District of Columbia reaffirmed its prior decision that the Securities and Exchange Commission's (SEC's) "conflict materials" rule violates the First Amendment.
